

Fiber Optics

For over twenty years, Magic Lite has been a solid leader in fiber optics, providing safe efficient lighting for museums and decorative applications around the world. Even with all the technological changes happening in today's market place, fiber optics still has a meaningful role in the lighting industry. Fiber optics is used extensively in applications such as:

- ✓ Museum showcase lighting
- ✓ Water features
- ✓ Pool lighting
- ✓ Neon alternative (side emitting fiber)
- ✓ Decorative star ceilings
- ✓ Inaccessible areas (maintenance free)

In fact, the development of high powered LED products allows us to marry these two technologies with powerful LED illuminators pumping colour changing light into fiber optic cables.

Our Fiber Optic CARO system has been used in many prestigious museum applications including:

- ✓ The Museum of Jewish Heritage, NY, NY
- ✓ Canadian Museum of Civilization – Ottawa
- ✓ Viking Exhibit (travelling exhibition) Canada
- ✓ The Dead Sea Scrolls (Travelling)

And many more.

Complete details on Magic Lite's fiber optic products and capabilities are available at http://www.magiclite.com/product_fibre_basics.html or contact Magic Lite at lights@magiclite.com or **1-888-945-5483** for your personal catalogue.
