

TOKISTAR LIGHTING INC.

Gradient™

Tokistar Gradient is a highly efficient LED luminaire for use in wall grazing and other interior lighting applications. The system incorporates high-output LEDs within an extruded aluminum housing. Heat sinking inside the fixture ensures all exposed surfaces remain cool to the touch.

Gradient's optics package includes four lens styles to control, shape and direct light for the greatest impact.

Tokistar offers all the components necessary to dim Gradient from industry-standard DMX or 0/1-10VDC dimming systems. Wiring is in parallel so fixtures can be ordered with any number of LEDs from one to thirty-two.

Grazing light evenly illuminates this distinctive wall panel.
